1 REDDOXX MailSealer Light - Introduction

A sender of an email can encrypt messages with MailSealer Light, a product from Reddoxx. The recipient who receives that email needs an additional software called "MailSealer Light Reader" to read the message. You can download this software under <http://mailsealer.reddox.net>.

The password (passphrase) to decrypt an encrypted message you can request from the sender.

2 MailSealer Light - Application

2.1 Getting an encrypted email

You have received an encrypted message. In order to decrypt this email, you need the software called „Reddoxx MailSealer Light Reader“. This must be downloaded only once. Click on the hyperlink that you have got within the email.

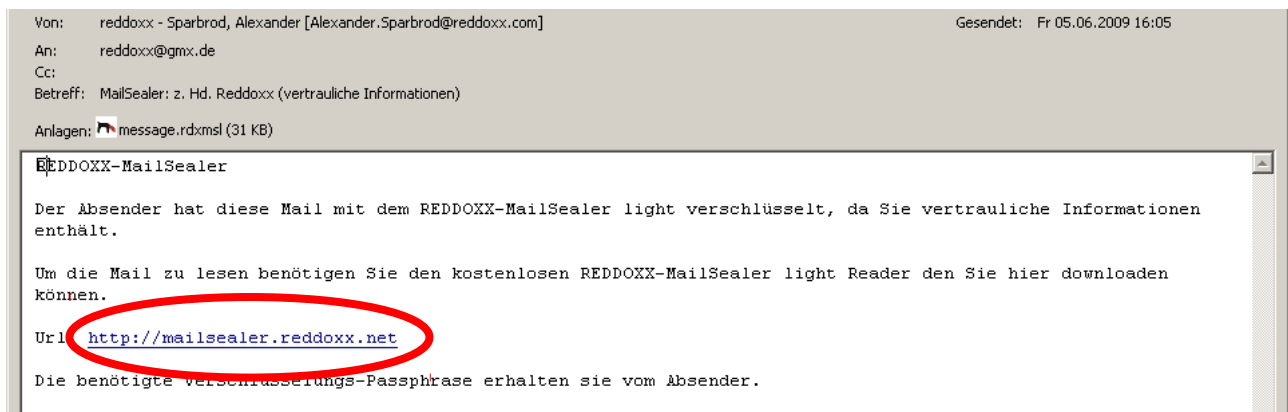

Illustration: encrypted e-mail form the sender

You receive an email from the sender. The example is explained with MS Outlook. These functions are also possible with other mail clients (e.g. Thunderbird, Lotus...).

2.2 Download and encrypt the software

After you clicked on the hyperlink, you will be forwarded to the Reddoxx website:
