

Release Notes Software Build 1023 (Final)

Rottweil, January 2008

New features:

- REDDOXX Mailsealer S/MIME
- Virus Scanner optimization
- Acceleration of mail processing on high work load
- Dynamic IP Black List Blocking during SMTP (SMTP-Server).
With massive spam-attacks based on Denial-of-Service mechanism the REDDOXX appliance was under heaviest load. This results into a much slower processing on the incoming queue and mail delivery delays. To use this new feature you first must activate it. See under SETTINGS – ADVANCED – DYNAMIC IP BLACK LIST, but only with the new admin console software.

Bugfixes:

- Compatibility problems with other mail servers in conjunction with mail size limitation solved.
- Renaming archived mail files did not show mails anymore – now solved.
- MailSealer light: Passphrases which have been placed inside the subject, now are handled prior to the passphrases being stored inside the user console.
- On big MailDepots (> 500.000 mails) there was a very long response after releasing a mail from the Spam- or CISS-queue or from the MailDepot..
- The report now runs more stable due to an improvement of the internal scheduler
- The process of working on the incoming queue was improved and now runs much faster. Also the ordering principle of First-In – First-Out now is running correct. On heavy load some earlier received mails were not be considered consequently.
- Bug in virus scanner fixed (RC=2 and others)

Important note:

- Please remove inside the filter settings the following entry from the list: „relays.ordb.org” (mark and press DEL-key). Due to that address does not exists anymore this entry was delaying the validation process on waiting for a timeout.

Please visit our FAQ-Area at the RSC (<http://support.reddoxx.net>). You will find there the current console software and the latest manual versions inside the REDDOXX Download Center.

Notes for updating to Build 1023 (Final)

1. Requirements

In order to be able to update your REDDOXX appliance to build 1023 (Final), build 1022 SP2 has to be installed on the appliance. **Use the new consoles (sfadmin.exe and sfuser.exe) for this update.** You can download them at <http://support.reddoxx.net>

If you have installed Build 1023-BETA, you must install the Beta-Service Packs Beta-SP1 und Beta-SP2, before you can upgrade to Build 1023 Final.

2. Request update

In the admin console at "Appliance Administration/Updates" you can request the update. After that, the updates are being downloaded to the appliance and are available for installation after a few moment. Note: By pressing F5 you can refresh the list. Should your appliance not be running on 1022 SP2, this build will be transmitted likewise.

The updates have to be installed in the proper order. Should you be running a version that is older than build 1017 please contact REDDOXX support in order to receive the updates.

3. Install updates

In order to install an update, please select the respective update from the list shown at "Appliance Administration/Updates". By clicking the right mouse button you can install the update. After a successful update, the appliance needs to be rebooted.

4. Check valid software subscription

Since Build 1020 software updates can be requested only with valid subscription.
