

Release Notes Software build 1024 SP2

Rottweil, September 2008

Fixed:

- Receiving mails with special prepared mail headers could force the appliance to crash if mail sealer is activated.
- Incorrect display of signed and crypted mail when used with some mail clients (webmailers).
- Error at the end of a backup while unmounting the backup share (Error message: Backup failed: RC=1)
- If the time server were not reachable at boot time of the appliance, the system time was not set correctly from the BIOS clock.

Notes for updating to Build 1024 SP2

1. Requirements

In order to be able to update your REDDOXX appliance to build 1024 SP1, build 1024 Final has to be installed on the appliance.

2. Request update

In the admin console at "Appliance Administration/Updates" you can request the update. After that, the updates are being downloaded to the appliance and are available for installation after a few moments. Note: By pressing F5 you can refresh the list. Should your appliance not be running on 1024 final, this build will be transmitted likewise. Service packs have to be requested and installed individually.

The updates have to be installed in the proper order. Should you be running a version that is older than build 1017 please contact REDDOXX support in order to receive the updates.

3. Install updates

In order to install an update, please select the respective update from the list shown at "Appliance Administration/Updates". By clicking the right mouse button you can install the update. After a successful update, the appliance needs to be rebooted.

4. Check if software subscription is valid

Since Build 1020 software updates can be requested only with a valid subscription.
