

## Release Notes Software Build 1026

Rottweil, March 2009

**Note: Within a cluster configuration both nodes will reboot after the update process.**

### **New features:**

- Support the REDDOXX MSX-Agent for Microsoft Exchange Server Archiving
- Support for policy based message archiving
- Improved failure detection on cluster

### **Bugfixes:**

- The Engine crashed in some cases during the generation of Spam reports
- The address White-/Blacklist did not work properly if the sender uses BATV
- Special characters were not displayed correctly on the archive list.
- The certificate chain will be added to the message on signing
- Sometimes the full text indexer finished with RC=134 in conjunction with corrupt attachments

### **Known limitations:**

- Reddoxx Virtual Appliance with **VMware ESX**.  
Version 1025 and later of Reddoxx Virtual Appliance requires VMware ESX Version 3.0.3 or higher. Check your VMware Server Version **before upgrading** the Reddoxx Virtual Appliance from version 1024 to version 1025.

## Notes for updating to Build 1026

### 1. Requirements

In order to be able to upgrade your REDDOXX appliance to build 1026, version 1025 has to be installed on the appliance.

### 2. Request update

In the admin console at "Appliance Administration/Updates" you can request the update. After that, the updates are being downloaded to the appliance and are available for installation after a few moments. Note: By pressing F5 you can refresh the list. Should your appliance not be running on 1023 Final, this build will be transmitted likewise.

For the update to **version 1025** – also known as a **System Upgrade** – there is a separate manual available. You will find this on our support pages under <http://support.reddoxx.net/manuals.php>.

The updates have to be installed in the proper order.

### 3. Install updates

In order to install an update, please select the respective update from the list shown at "Appliance Administration/Updates". By clicking the right mouse button you can install the update. After a successful update, the appliance may need to reboot.

### 4. Check valid software subscription

Software updates can be requested only with valid subscription.
